

Comtax® Basic

Online

Since 1985, users have discovered how Comtax® can help create effective cost control. Clients include multinational companies, lawyers, tax consultants and leading banks worldwide.

Comtax® Basic allows you to calculate your cross-border transactions with all tax costs taken into account to and from 129 countries/entities worldwide, supported by an extensive reference database. To guarantee that you always work with the latest information the software is continuously updated including a comprehensive monthly newsletter.

With Comtax® Basic you may:

- Set up calculations with up to two intermediary countries using dividends, interest, royalties or fees. The intermediary position can hold a range of countries. All countries inserted in a position are evaluated in the calculation and if possible the 30 best results are presented and described in detail.

- Calculate with dividend, interest (two types), royalty (three types) and fee (two types) transactions.
- Calculate with different tax positions, e.g. current loss.
- Insert your own tax rates and figures in the calculations results.
- Access a comprehensive database covering more than 400,000 tax rates which are updated monthly. Historical corporate tax rates are also covered.
- Generate a complete overview of a country's all tax rates in the 'Ratefinder' function.
- Calculate an effective corporate tax rate.
- Easily reachable structured commentaries per country. The tax library gives you updated information for further research.
- Complete the analysis with the capital gains tax calculation on the realisation of shares.
- Swiftly export information and calculation results to be used in reports.
